Subject: Re: Re-opening Pandora vent Holes and Reclamation

Tom Munson is now the lead for that area, but he is out of the office through the 31st. Becky Doolittle is also out, I believe until the 29th.

From DOGM's perspective and consistent with our last approval of this nature, go ahead and re-drill the holes, but the existing holes will need to be reclaimed within 6 months of opening the new holes. I don't consider this an amendment to your plan because you are not changing the number of drill holes or the disturbance.

If you need BLM approval before Becky gets back, I suggest you contact Lynn Jackson or Brent Northrup.

As soon as things dry a little in the spring, we should do another joint inspection of all the drill holes.

I will print this e mail and put it in the file.

Thank you for notifying us of this activity.

Attached is a map of two vent holes located between the La Sal and the Pandora numbered 2300 #1 and 2300 #2. Both of these vent holes are collapsed and no longer offer ventilation to the mines; which unfortunately is needed right now. We are proposing to drill adjacent to the 2300 #2 vent hole (within the existing pad/disturbed area) to provide additional ventilation and perform concurrent reclamation on the existing 2300 #2 and then at the same time reclaim the 2300 #1 which will not be needed. Both of these vent holes are historical and fully bonded, and prior to sending you formal requests and notification (if needed), I thought I would send a map and call to discuss. I will try and touch base with you both if not this afternoon, then early next week.

Paul, is there someone else I should contact related to this?
